

## **TAKE THAT FIRST STEP TO SECURE YOUR WAY OF LIFE**

### ***AST Systems Are Custom Installed***

It's a fact that alarm system users have taken an important step in detecting intrusion and the early warning of smoke and fire. When you have an alarm system installed by a professional installer from a reputable security company, you will receive proper instruction on its use.

Arming and disarming the system should be easy to learn. These instructions need to be passed on to anybody who has a key to your home or business -- employees, children, grandparents, neighbors, cleaning services and anyone else to whom you have authorized access.

Your security system will be designed and installed to be trouble free for your specific daily routine. It will provide you easy protection for your home and loved ones or your business. You don't need to panic if your system is accidentally tripped; just follow your alarm's specific procedures for canceling the dispatch.

Proper maintenance and regular testing of the system will ensure years of affordable service and peace of mind for you, your family and associates.
